# Quality Organic Gardening Products that Deliver

Product Information Sheet & Price List January 2016

### Comfrey Plants \$4,50 or as priced

Grow in a deep hole of rich compost, Prefers marning sun, avoid planting in western sun. It is a No. I compost activator. It leaves make a rich liquid fertiliser (they hold 15 of the top minerals), dilute to 1 part Comfrey 4 parts water. Chooks and worm farms love the rich mineral content of chopped up Comfrey leaves. Use as a mulch cover.

# Cow Manure (Shredded) per bag approx; 8kg \$5.00

Being shredded makes all the difference to it's blending ability. Use as a soil enricher - it attracts microbial activity and holds moisture. Use in potting mixes, composting and worm farms.

# Distomaceous Earth (Absorbacide) Per tub \$10.00

This fine powder is the perfect non-chemical, organic approach to serious pest control. Rich in minerals, it feeds and protects plants and, when used as a dusting powder, desiccates attacking insects killing them by absorbing their protective coating of wax and oil so they dehydrate and die. Use on veggies, flowers, orchide, roses, fruit trees, beehives, ante, Waming: Personal Protective Equipment, goggles, mask and gloves must be worn.

# Epsom Salta (Magnesium Sulphace), 1kg tub \$5.00

For plants it greatly improves the absorption of Nitrogen and Phosphorus, increases Chlorophyll production, helps produce more flowers, plants grow bushier, stops yellowing of leaves. Use 20ml to 8 fittes of warm water.

### Mushroom Compost Per bag approx, 8kg \$5.00

With regular use will increase your soil's organic matter and microbial activity. It will aid in healing ured and depleted soils. Mix into sandy and clay soils. It's loaded with minerals, retains moisture. Use to feed hungry plants and trees. Makes a strong, rich, liquid fertiliser. Mix one litre of compost liquid to 10 litres of water.

# Palagonite - Rock Mineral Dust (Dinosaur Soil) 8kg bag \$5.00

Is the No.1 quality Lava rock mineral fertiliser in todays market. It contains high levels of Silica, Calcium and vital trace minerals that feed both the plant and the soil. It's capacity to hold water, especially in sandy soil, it legendary. It's mineral content rejuvenates depleted soils. Use in compost making and soil mixes. Apply around the base of plants and trees. Greens up lawns. Fosters the growth of micro-organisms.

## Sea Rock Fertiliser 1kg tub \$12,00

A winning combination of dried Seaweed Kelp and Rock Mineral Dust (Palagonite), contains over 80 trace minerals, which are a lifeline for the growth and stimulation of all plants, its slow release action feeds plants. Use on seedlings, pots and hanging baskets, one teaspoon to a new seedling when planting out. For Orchids, make up a cloth teabag (use panryhose or Chux) of 6 parts 5ea Rock to 2 parts Epsom Salts. Wedge the wet bag among the roots where it can feed the Orchid on a constant basis. The bag holds the food source intact. Keep it moist for best results and replace the bag as needed. Larger pots and hanging baskets will need an increase in the ratio of the mix.

Natural Kelp Liquid Seaweed Kelp Plant and Soil Conditioner (This is the only one I use) 750ml bottle 59:00 it is the same consistency as if it has just come out of the ocean. A genuine, complete product. An efficient, natural, organic source of the worlds richest micro-nutrients, this bottle includes the highest known alginate content, which comprises 50% of the kelp – that promotes growth in both plants and soil, especially root development, by enhancing bacterial and enzyme activity helping to maintain moisture for longer periods. Also extending the flowering period of a large variety of plants, this unique, quality liquid fertiliser is outstanding value and is ahead of all the rest. It feeds and protects like no other and is in my opinion and experience the best liquid fertiliser money can buy.

### The Perfect Sail Recipe

### Tree Peste, Ikg tub \$13.00

It's a bio-dynamic formula that works wonders when applied to the trunks of trees by converting the pasts into a paint. Among the many ingredients is Diatomaceous Earth which, along with other ingredients, protects and feeds the plant through its bark. The mixture works well against tree borers, scale and other insects. It also helps to protect the tree from frost and sunburn. Use on all fruit trees, citrus in particular. Can be made into a very effective liquid spray that helps repel grasshoppers, caterpillars, beetles and sapsuckers. Strain through a Chux cloth, use a little Seaweed/Kelp liquid to break down mixture. The paste helps the tree to seal up cuts and wounds against infection, also feeds and protects. Useful after heavy pruning. Rose bushes love it. Apply at the beginning of each season as a protector and food source. Be proactive. See instructions in tub.

### Vermiculita A standard bag \$5.00, Super-large bag \$35

A truly incredible product that holds seven times its own weight in water! This natural organic material has been popped like popper to enable it to hold such large amounts of water making it an invaluable help in retaining moisture in pots, especially in hanging baskets & orchids. Vermiculite is an important component to use when making potting and seed raising mixes – always wear a mask. Fantastic for keeping pot plants insulated, Vermiculite (as so many people are now discovering) when used as a top muich on pot plants keeps them from drying out – just 2.5cm deep coverage is sufficient. When planting out trees and shrubs, a revolutionary step is to put Vermiculite into the base of the hole before adding your soil and plant. A 10line bucket of Vermiculite will provide the ongoing, slow release moisture that helps any plant survive for many years in the driest of dry times and the poorest of conditions.

### Worm Farm \$50.00

It's a complete package and comes with 400 worms. Light weight, practical, with an easy to follow maintenance guide plus a help-line number. The worm farm will supply two litres of rich concentrated liquid fertiliser every week, which can be turned into 10 litres. Worm farm liquid is the richest liquid fertiliser known to man. Vermicast (the soil produced) is also the richest soil known to man.
