Spring Fair 2020

Program for Maleny Showgrounds Exhibition Hall

Morning Session 8.30 – 12.00	
Entrance Fee \$10.00	
[Maximum of 50 persons]	
8.30 – 9.00	Pottery, Woodworking and Botanical Art Demonstrations. Practical demonstration performed by craft professionals
9.00 -9.30	Fabulous Flower Arrangements You have lovely flowers in the garden but need to display them with pizzazz at a dinner party or a special event.
9.30 – 10.15	Native Plants for the Garden Spencer Shaw from Forest Heart will be displaying and talking about some great native plants adding beauty and habitat to any garden.
10.30 – 11.15	Plants for a Changing Climate Mike Wells is a well-known horticulturist who specialises in garden design, plant selection, soil improvement, plant nutrition, and efficient irrigation systems. He will discuss various plants for your garden and is particularly passionate about turning bare soil into a productive patch.
11.30 – 12.00	Successful Tomato Growing Ian Reimers will provide practical information not found in books that makes the difference when growing tomatoes.
12.00 –12.30	COVID Cleaning
Afternoon Session 12.30 – 16.00	
Entrance Fee \$10.00	
[Maximum of 50 persons]	
12.30 – 13.00	Pottery, Woodworking and Botanical Art Demonstrations. Practical demonstration performed by craft professionals
13.00 – 14.00	Growing Roses without Chemicals that harm Bees & Insects Caz Owen's farm based in Queensland is Australia's only accredited chemical free Rose Farm. She will focus on processes used to promote general organic gardening covering edible flowers and herbs.
14.00 – 15.00	Are Bees smarter than Humans? Dr. Max Whitten was Chief at the CSIRO Division of Entomology before retiring in 1996. He is the current Chair of the Wheen Bee Foundation. Max talks about the importance of bees in pollination dependent industries in horticulture, agriculture and in your vegetable and flower garden.
15.00 – 15.30	Meet Monty – a compost monitor Composting is the biological decomposition of organic matter. Micro-organisms consume organic material and oxygen that create heat as a waste product. By measuring this heat you can predict the health and efficiency of your composting.
15.30 – 15.40	Review of the day.
15.40 –16.00	Close and COVID Cleaning
